Workbook guide

How to navigate

To get back to the “content page” you can click on the Norrøna logo in the top left corner.

Content page

From the content page you can easily navigate to the activity or concept that you would like to go to, by clicking on the activity or concept. If you would like to go directly either to the Men’s or Women’s product pages, you can click on either of the genders.

When you are finished looking at one concept, you can go directly back to the content page by clicking on the Norrøna logo in the top left corner.

Material logos

In the product pages you can find material and fabric logos at the of the bottom right corner. To learn about what these logos mean, you can click on the logo. Then you will be sent to the “Technology and materials” pages with more information.

Product information

Each product page shows one product, with the different colors that exist for that product. If the color is new, you will see “New” at the top left corner of the product picture.

If the product is new, it is written “NEW” over the product name in the top right corner.

Sample size

On our model images, the male models are wearing size large and the female models are wearing size medium.

In the product description we have listed weight for all products, and inseam on shorts and pants. These numbers are based on our sample sizes.

Welcome to nature

There is something about this country, about my homeland of Norway. The fjords, the glaciers, the forests. The waves thundering against the rocky shores. The mountains towering above us. There is something about the Norwegian wilderness that brings out the adventurer in us. There is something about the climate here in the far north; up here, a single day can put us up against the challenges of four different seasons and still be a magical experience. As long as we are well prepared and are wearing the right clothing.

Way back in 1929, my great-grandfather, the young craftsman Jørgen Jørgensen, realized that Norwegians have a constant longing to be outside and deserve the best possible equipment. He developed products without compromise. He laid the cornerstone of what would become Norrøna, now a leading international supplier of outdoor gear.

Norrøna was behind the world's first tunnel shaped tent back in 1972. Norrøna launched Europe's first Gore-Tex jacket in 1977. And we unveiled an anatomical backpack as early as in 1980, functional and stylish clothing for steep freeriding in 2004, a separate collection for singletrack riding in 2008, and functional and sustainable wetsuits for arctic surf in 2017.

Norrøna has been part of expeditions to the North Pole and South Pole, Mount Everest and the Great Trango Tower in the Karakoram. Not to mention, Norrøna has been at the forefront of alpine style climbing in Alaska, Patagonia and Antarctica. Our ambassadors help push the envelope of what is possible in skiing and snowboarding, arctic surf, mountain biking, climbing and polar expeditions.

My great-grandfather, grandfather and father all believed that Norrøna had to create products with the best possible design, cutting-edge functionality and the highest quality. They believed that product development had to be driven by the bravest among us; those who dare to think new; those who take on extreme adventures. We still do.

Welcome to nature.

Jørgen Jørgensen

Fourth-generation owner and chief executive of Norrøna.

Our corporate responsibility

Nature is our playground, our motivation and our source of inspiration – it's the reason why Norrøna exists.

Environmental and social responsibility is a fundamental part of everything we do throughout the company. It is of the utmost importance that our value chain is ethically responsible and that our products are as environmentally friendly as possible. We have a goal of becoming a leader within the field in the outdoor industry and you can study our 2020 CSR roadmap on our website norrøna.com.

While a new Norrøna product is awesome, an old one maybe even more so. A long lifespan is one of the best tools to minimize a product's environmental footprint, so we've been offering repairs on all of our products since the beginning in 1929. By making high-quality gear that lasts for years and can be repaired, we make sure you don't have to buy new stuff. In 2018, we fixed over 10 600 products, an increase of 2000 from 2017.

Norrøna wishes to use as many recycled fabrics and materials when making a garment. This is a guiding principle when designing new products, and when buying fabrics and trims. We are constantly searching the market for high quality recycled fibers and per 2018 71% of our polyester products are made with at least 50% recycled fibers.

As animals have no voice in terms of their well-being, we see it as our obligation to ensure that all of our animal products originate from animals that are treated well and that the processes of retaining the

products are done without causing any harm. By making sure that all of our down products have the RDS (responsible down sourcing) down standard and using traceable, mulesing-free wool, we safeguard the welfare of animals and provide retailers and consumers with a greater confidence in responsible sourcing. As part of our obligation, we do not source fur.

Despite its natural traits and soft feel, conventional cotton poses a long term and highly negative impact on nature. Luckily there's something called organic cotton. Organic cotton is grown using methods that have a lower impact on mother earth, there's no use of toxic chemicals, and it promotes and enhances biodiversity and biological cycles. Today, all of our cotton products are made of 100 % organic cotton.

All though there are many challenges, seeing results and knowing that we can influence people's work environment on the other side of the globe gives us the motivation to work even harder. Norrøna is working to promote proper labor and environmental conditions in our supply chains through close cooperation with our suppliers and partners. To clarify what we expect from our suppliers Norrøna has developed guidelines for ethical trade in our value chain; the Codes of Conduct. All Norrøna suppliers must sign them before entering a partnership and we inspect and follow up all of our factories according to our policy.

Our commitment goes beyond the value chain of our products. We strive to be as socially and environmentally responsible as possible as a company and have specific targets related to our employees, our HQ at Lysaker, and the company as a whole. The Norrøna House is exclusively powered by renewable energy and we have the ambition of all employees traveling sustainably by the end of 2020. In 2018 98 % of the employees commuted eco-friendly and we've initiated several alternatives to achieve this, e.g wardrobes with showers, parking reserved electric or hybrid cars and internal bike/walk/run to work competitions. We also have a long-term ambition to become a zero waste to landfill HQ, meaning all waste generated at our HQ will be recycled.

In true Norrøna spirit, we want to contribute to the conservation and protection of the nature. Since 2015 we have taken 1% of our sales and put it in a fund reserved for causes and organizations working to promote sustainability and environmentally friendly initiatives. So far, we've donated 20,2 million NOK and there's more to come.

Repairs since 1929

We've been offering repairs on all of our products since the beginning in 1929, actively promoting a long lifetime for our products. Every year, we give thousands of products some extra love and care, so they can join adventures for decades.

We have repair centers in stores around the world. In 2018, we repaired over 11 000 products, securing long product lifetime – even on many products over 30 years old.

Norway

Our inspiration

At Norrøna, we name our collections after epic destinations in Norway. Each place, mountain, or island describe their areas of use.

All products are developed to meet the extreme users' requirements to materials, quality, fit, and functionality following our design philosophy, Loaded Minimalism™.

Ski/Snowboard

We divide our ski/snowboard category into three distinctive concepts; lofoten, tamok, and lyngen, all with purpose-built solutions for their intended activity.

Mountaineering

We divide our mountaineering category into three concepts; trollveggen, falketind, and lyngen. Developed to master big walls, long climbs, and various conditions, each garment is created to push the limits of protection, durability, and mobility.

Outdoor/Hiking

Our hiking collections each assist your quest to boldly encounter nature; svalbard supports general hiking and trekking demands, and bitihorn backs up fast trekking protection in addition to falketind for all weather and conditions.

Mountain Biking

Norrøna's collection for mountain biking is divided into two: fjørå and skibotn. Rain and rough terrain demand functional clothing that will keep you warm and protected – without sacrificing range of motion.

Hunting

We divide our hunting category into three concepts: kvintherad, finnskogen, and recon. So whether you hunt in the mountains or the forest or need the most durable hunting equipment, we have a choice for you.

Lifestyle

Hang up the heavy technical gear and do your own thing in comfort and style with everyday basics and activewear. Built with functional twists and solutions, 100% organic cotton, and recycled designs.

Surfing

The arctic ocean – a challenge for our vision, "Welcome to nature". Designed to withstand the harsh, Arctic waters, this collection offers comfort and warmth with sustainable materials.

NEW

Iofoten Thermal Pro Hood M's

1001-22

Our most versatile ski/snowboard midlayer.

This half-zip jacket is made for freeriding but also works for mountaineering, trekking, and general outdoor. It's made with different Polartec® fabrics to provide optimal thermal performance and comfort.

We use the Polartec® Power Grid™ in the back, stomach area, underarm, and hood because it offers excellent quick-drying and moisture-wicking properties. This patented grid design structure is a way to reduce fabric weight while increasing warmth and compressibility. Open-air channels surrounding each segment of the grid allow easy release of all excess body heat as it builds during activity.

The shoulders, neck, and top sleeve are made in Polartec® Thermal Pro® because of its superb warmth-to-weight ratio. This unique knit technique creates air pockets that trap air and retain body heat, providing outstanding warmth to weight. Not only are they very comfortable, but these fabrics offer excellent breathability, dry quickly, and are very pill-resistant.

Key features include a snug hood that fits under the helmet, a two-way half front zip, a hand-warming pocket, a chest pocket, and comfortable, stretchy cuffs with thumb holes. Side front zip to avoid zipper layering. Placement of pocket easy access when opening jacket.

The jacket has a technical fit with Y-cut and articulated arms for good movement and it's made to fit underneath a bib.

NEW
Iofoten Thermal Pro Hood W's
1003-22

Our most versatile ski/snowboard midlayer.

This half-zip jacket is made for freeriding but also works for mountaineering, trekking, and general outdoor. It's made with different Polartec® fabrics to provide optimal thermal performance and comfort.

We use the Polartec® Power Grid™ in the back, stomach area, underarm, and hood because it offers excellent quick-drying and moisture-wicking properties. This patented grid design structure is a way to reduce fabric weight while increasing warmth and compressibility. Open-air channels surrounding each segment of the grid allow easy release of all excess body heat as it builds during activity.

The shoulders, neck, and top sleeve are made in Polartec® Thermal Pro® because of its superb warmth-to-weight ratio. This unique knit technique creates air pockets that trap air and retain body heat, providing outstanding warmth to weight. Not only are they very comfortable, but these fabrics offer excellent breathability, dry quickly, and are very pill-resistant.

Key features include a snug hood that fits under the helmet, a two-way half front zip, a hand-warming pocket, a chest pocket, and comfortable, stretchy cuffs with thumb holes. Side front zip to avoid zipper layering. Placement of pocket easy access when opening jacket.

The jacket has a technical fit with Y-cut and articulated arms for good movement and it's made to fit underneath a bib.

Material	89% Recycled Polyester, 11% Elastane
Material 2nd	100% Recycled Polyester

Iyngen Gore-Tex Pro Pants M's 2002-22

Our lightest waterproof ski/snowboard pants developed for ski touring.

These lightweight pants are designed for freeride-minded ski touring but are also suitable for general skiing activities, all-year mountaineering, and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

The main fabric is a 3-layer 70D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection, and optimized breathability. It has a solution-dyed rip-stop backer. The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include Custom-Fit Waist™ system for easy customization, side venting from hip to below the knee with two-way zippers, two strategically placed thigh pockets, and a small key pocket. Zipper openings from the lower leg that run-up to the boot shaft enable easy adjustment of width to accommodate walk mode and ski mode.

Snap tightening under the knee enables tightening around the leg to prevent loose fabric when using crampons and it has integrated lightweight adjustable snow gaiters. The pants are compatible with the mountaineering bib.

The pants have a roomy regular fit with articulated knees and seat for optimal touring mobility.

Material	Gore-Tex® Pro most breathable 3-layer, 70D recycled nylon
Inseam length	87,3 cm (size L)
Weight	568 g

NEW

lynngen Gore-Tex Active Jacket M's

2016-22

Our most breathable, lightweight waterproof ski/snowboard jacket developed for ski touring.

This weather protective jacket is made for ski touring but works excellent for other mid to high-intensity activities ranging from trekking to lightweight mountaineering. It's made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), breathability (RET 3-6), and total windproofness.

The jacket blends two GORE-TEX® technologies: The front and underarm area are in Active SHAKEDRY™, a technology that eliminates the face fabric, preventing the absorption of water to maintain comfort during high-intensity activities. Wearers will not experience the chilling effect that can result from a wetted-out face fabric, and the garment dries out fast.

The hood, shoulders, upper arms, and bottom hem are in 3D GORE-TEX® Active recycled nylon fabric which is built for extreme breathability and is ideal for highly aerobic, done-in-a-day activities. Together, they offer excellent water protection with marked leading breathability.

Key features include a helmet-compatible hood with one-hand cord adjustment, two chest pockets, a small inside chest pocket, lightweight hand gaiters, and asymmetric cuffs with Velcro® tightening. To provide optimal venting, it has a zipped front solution with a full-length venting area running from the chest and down to the hem, which also enables airflow while keeping your neck and face protected.

The jacket has a slim fit with a Y-cut and articulated arms for good alpine movement.

Material	Gore-Tex® Active, 3D recycled nylon
Material 2nd	Gore-Tex® Active SHAKEDRY™
Weight	308 g

NEW

Iyngen Gore-Tex Paclite Overpants M's 2010-22

Lightweight, packable, and waterproof ski touring over pants.

These protective over pants are made for ski touring and are the ultimate bring-along pant when touring on days with uncertain weather and you don't wish to wear waterproof pants all the time. They are also suitable for general all-year mountaineering and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

We use the GORE-TEX PACLITE® 4 PLUS fabric – a soft, lightweight tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being durably waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include full side 2-way zippers to make them easier to put on and off, snap solution in the waist to keep the zippers all open while still keeping the pants in place, an elastic band in the back, internal webbing adjustment in the front, zip-fly and zippered pockets. Velcro® adjustment under the knee enables tightening around the leg to prevent loose fabric when using crampons. The bottom hem has an elastic cord for adjustment and a snap closure to tighten it if needed. The pants are suspender compatible.

The pants have a technical fit with articulated knees and seat for optimal touring mobility. The lower legs are on the wider side, as they are made to be put on top of ski touring boots.

リンゲンドライ2サーモ60 ジャケット

軽くて保温性の高い中綿入りのインサレーションジャケットを防水仕様に仕上げた画期的なジャケットです。コンパクトに収納でき、インサレーションとして使用することも、アウターとして単体で使用することも、ザックの小さなスペースに入れて持ち運ぶことも可能です。縫い目はすべてシームテープ処理が施され、耐水圧は20000mm。表地は撥水加工 (PFC free DWR) された15デニールのリサイクルナイロン生地を使用、裏地には同じく撥水加工 (PFC free DWR) された20デニールのリサイクルポリエステル生地を使用しています。

中綿にはPinnecoを使用し、各部位に適切な厚みが配されています。

(型としてTシャツ部=60g/m², その他=40g/m²)

スノーヘルメット着用を考慮した大きめのフードは片手で調節ができ、伸縮性のある袖は風の侵入を防ぎ、裾はドロコードで絞りの調節が可能です。ハーネスに干渉しない2つのミッドマウントポケット、インナーポケットを配しています。

テクニカルフィット ※ポケット内は防水ではありません。

lyngen cotton Pants M's

2012-22

A durable windproof cotton-rich ski/snowboard pant developed for ski touring.

These cotton pants are developed for ski touring, but also work perfectly for mountain skis and touring. The main fabric is a premium recycled cotton mix quality, and we use this because it offers great breathability, windproofness, and durability on both cold and warm dry days.

The 75% organic cotton/ 25% recycled polyester mix offers the natural properties of cotton but has added extra strength, durability, and faster drying due to the polyester. The pants are reinforced on the bottom leg with a 200D waterproof 2-layer recycled nylon face fabric for extra durability and to prevent a soggy bottom hem.

Key features include a Custom-fit waist system™, a silicon strip to prevent gaps and friction, mesh lines ventilation from hip to knee, zippered hand and back pocket and a waterproof membrane on the inside of the knees to provide extra windproofness and stay comfortable while sitting down on the snow.

Snap tightening under the knee enables tightening around the leg to prevent loose fabric when using crampons. The bottom has a zip with a gusset to fit both walk and ski mode, and it has an adjustable snow gaiter with webbing. The pants are compatible with our snap-in system and are also a perfect combo with the lyngen Gore-Tex paclite pants.

The pants have a regular fit with articulated knees and seat for optimal touring mobility.

lyngen Alpha100 Zip Hood M's 2011-22

Our most breathable insulation jacket.

This lightweight midlayer is made for ski touring but is also great for general outdoor, especially mid to high-intensity activities due to its excellent breathing and insulation properties.

The face fabric is a lightweight double weave recycled nylon aero100 fabric, because it provides a very good combination of low weight, breathability, and wind protection, plus a little bit of stretch for better movement. It's a durable 20D ripstop quality with PFC-free DWR treatment for additional water resistance.

The jacket is lined with premium Polartec® Alpha® insulation, the world-leading breathable insulation engineered to provide consistent warmth, while continuously releasing excess body heat, and allowing greater breathability during activity. It insulates the user when highly aerobic as well as when less active.

For optimal performance, we've used two Polartec® Alpha® qualities: The body is lined with Polartec® Alpha® 90 (90 grams/m2) while the shoulder area, which has a more demanding muscle group, is in a thicker Polartec® Alpha® 120 (120 grams/m2) quality. This is also more resistant to compression from backpack straps.

Features include hand pockets and a chest pocket with zipper closure, helmet-compatible hood with one-hand adjustment and a stiffer brim for better wind protection, an inner placket to prevent cold spots, and an elastic bottom hem.

The jacket has a technical fit with a Y-cut and articulated arms for good movement, with slight ease to give it a bit more jacket-like function.

2048-22

Our lightest waterproof ski/snowboard pants developed for ski touring.

These lightweight pants are designed for freeride-minded ski touring but are also suitable for general skiing activities, all-year mountaineering, and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

The main fabric is a 3-layer 70D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection, and optimized breathability. It has a solution-dyed rip-stop backer. The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include Custom-Fit Waist™ system for easy customization, side venting from hip to below the knee with two-way zippers, two strategically placed thigh pockets, and a small key pocket. Zipper openings from the lower leg that run-up to the boot shaft enable easy adjustment of width to accommodate walk mode and ski mode.

Snap tightening under the knee enables tightening around the leg to prevent loose fabric when using crampons and it has integrated lightweight adjustable snow gaiters. The pants are compatible with the mountaineering bib.

The pants have a roomy regular fit with articulated knees and seat for optimal touring mobility.

Iyngen Gore-Tex Paclite Overpants W's 2014-22

Lightweight, packable, and waterproof ski touring over pants.

These protective over pants are made for ski touring and are the ultimate bring-along pant when touring on days with uncertain weather and you don't wish to wear waterproof pants all the time. They are also suitable for general all-year mountaineering and hiking. The pants are made in premium GORE-TEX® fabric, and we use this because it's the world-leading quality for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

We use the GORE-TEX PACLITE® 4 PLUS fabric – a soft, lightweight tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being durably waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

The bottom leg is reinforced with a lightweight 200D Vectran™ fabric to increase durability where the pants tend to rub against boots or steel edges.

Key features include full side 2-way zippers to make them easier to put on and off, snap solution in the waist to keep the zippers all open while still keeping the pants in place, an elastic band in the back, internal webbing adjustment in the front, zip-fly and zippered pockets. Velcro® adjustment under the knee enables tightening around the leg to prevent loose fabric when using crampons. The bottom hem has an elastic cord for adjustment and a snap closure to tighten it if needed. The pants are suspender compatible.

The pants have a technical fit with articulated knees and seat for optimal touring mobility. The lower legs are on the wider side, as they are made to be put on top of ski touring boots.

lyngen equaliser stretch Tights W's 2017-22

Windproof, stretchy tights developed for ski touring.

These technical tights are made for ski touring but also work perfectly for mountaineering, climbing, and trekking activities where you use larger boots. They're made to offer the next-to-skin comfort and movement of tights, and the functionality of ski pants.

The main fabric is a brushed, quick-drying, recycled nylon/elastane mix, and we use this because it offers excellent movement, breathability, and moisture-wicking properties. The thickness of the fabric is great for all-season use and makes it a good choice on dry spring-like days as well as dry cold days with high-intensity activities.

The pants are reinforced on the bottom leg with a 200D waterproof 2L fabric for extra durability and to prevent a soggy bottom hem.

Key features include a high, comfortable waist with a little coin pocket and lace for tightening, big stretch pockets on the thighs, and an adjustable bottom leg with a gusset to accommodate walk mode and ski mode. They also have integrated stretch snow gaiter

The fit is tight with articulated knees for optimal touring mobility, and it has a flattering bootcut silhouette.

Mountaineering

We divide our mountaineering category into three concepts; **trollveggen**, **falketind**, and **lyngen**. Developed to master big walls, long climbs, and various conditions, each garment is created to push the limits of protection, durability, and mobility.

trollveggen alpine climbing

Descending from Europe's first Gore-Tex jacket in 1977, the trollveggen Gore-Tex jacket and bib revolutionized clothing for alpine climbing. Developed for first ascents and demanding expeditions, it's continually refined and still a pinnacle of mountaineering performance. Named after the wall where it was first tested.

trollveggen Gore-Tex Pro Light Jacket M's 1605-22

Our lightest, durable waterproof mountaineering jacket.

This lightweight mountaineering jacket is made for demanding alpine climbing but works perfectly for all-season mountaineering adventures including trekking and ski touring. We use A GORE-TEX® PRO fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

This jacket is made in a 3L 40D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. It is reinforced with 3L 70D GORE-TEX® PRO (RET 6) fabric with 100% recycled nylon face to ensure maximum protection on the top hood, shoulders, and elbow panel.

Main features include a storm hood fitted for a climbing helmet with one-hand adjustment, asymmetric cuffs with Velcro® adjustments, two-way under-arm ventilation, strategically placed napoleon pockets to avoid interference with harness and backpack, and a two-way front zip for flexible ventilation.

trolveggen Gore-Tex Pro Light Pants M's 1606-22

Our lightest, durable waterproof mountaineering pants.

These lightweight mountaineering pants are made for demanding alpine climbing, but works perfectly for all season mountaineering adventures, both with or without skis and crampons. We use A GORE-TEX® PRO fabric, which is the world leading membrane for highly durable waterproofness (28,000mm), good breathability (RET lower than 13) and total windproofness.

The main fabric is a 3L 70D GORE-TEX® PRO most breathable fabric (RET 6) with a 100% recycled nylon face to ensure durable, reliable weather protection and optimized breathability. On the upper part, which is less exposed, we use a 3L 40D GORE-TEX® PRO most breathable (RET 6) 3-layer, 40D recycled nylon that is thinner and gives less bulk.

Main features include a functional 1/2 side two-way zipper for good venting options, Custom-fit waist system™, two zippered thigh pocket, adjustable ankle width, a bootlace hook, Vectran reinforcement on lower leg, and eyelets if you want to fasten a cord around the boot to make sure it stay in place. The pants are suspender and bib compatible. The pants have a regular fit with articulated knees and an ergonomic S-shape to improve mobility during vertical movement and decrease excess. The bottom legs can be expanded to fit ski touring boots.

trollveggen superlight down850 Hood M's 1619-22

Our lightest and most packable down jacket with a hood.

This premium down jacket is made for mountaineering but is suitable for a wide range of outdoor activities. You can use it both as a mid-layer and outer layer, making it a 4-season garment. It's made with a premium aeroDownproof face fabric to provide weather protection, lightweight and soft touch, and filled first-class down which offers excellent insulation at a low weight.

The main fabric is a high-tech, windproof, and extremely light 100% recycled 7D nylon material made in Japan. It offers great packability and is durable for its weight. To achieve an excellent warmth-to-weight ratio, the jacket is filled with high-quality, RDS-certified 850 goose down.

Key features include two hand pockets, a hood fitted for a beanie, a high and protective collar, elastic bottom hem and cuffs, and an exterior hang loop.

The jacket has a technical fit with a longer cut in the back for extra protection. The Y-shaped fit ensures good mobility. To ensure an even and lasting distribution of down, it's tightly quilted.

trolveggen flex1 Pants M's 1608-22

Our most advanced, fully featured softshell pants for mountaineering.

These stretchy mountaineering pants are made for demanding alpine climbing but work perfectly for all-season mountaineering adventures, ranging from trekking to ski touring with lightweight touring boots. The main fabric is a 199 gr/m2 flex1 softshell fabric, and we use this because it offers great movement, durability, windproofness, high breathability, and effective moisture transportation. The thickness of the fabric is great for all-year use.

The pants consist of two flex1 qualities; a 90D 4-way stretch double weave flex1 fabric in recycled nylon. From the thighs to the bottom plus the seat, we've used a highly durable 4-way stretch flex1 fabric in recycled nylon for extra protection. Both materials have been treated with PFC-free DWR.

Main features include a Custom-fit waist system with velcro adjustment, two zippered hand warming pockets, two tight pockets with bellows (one with mobile pocket), a 3/4 side zip that provides ventilation from the knee and up, and a gusset from knee and down. The bottom hem has a bootlace hook and eyelets if you want to fasten a cord around the boot to make sure it stays in place. under the boot, if wanted. They are compatible with suspenders, and mountaineering bib.

The pants have a regular fit with articulated knees to improve mobility during vertical movement. They can be worn over hiking boots and light ski touring boots.

フォルケティン ゴアテックス ジャケット

1年中使用できるレインジャケットとして開発されたNORRØNAのベストセラーシェルジャケットです。優れた軽量性と滑らかな生地感を持つGORE-TEX-KNITを採用し、耐久性の高い30デニールの繊維で構成された生地は冬の使用に十分に耐えつつ、夏の冒険や地元のトレイル探索に必要な軽さを提供します。

脇下にはダブルジップのベンチレーション、ストラップに干渉することのない少し高めの中マウントポケット、スキー用ヘルメットにも対応する大きめのフードを配し、あらゆる動きに対応する立体裁断がジャケット全体に施されています。首裏のシームテープのみ、皮脂による汚れや摩擦による剥離を防ぐ為太いテープとなっています。

falketind Gore-Tex Paclite Jacket M's 1812-22

Our lightest, most packable waterproof shell jacket.

This lightweight shell jacket is made for all-year mountaineering, but works great for general outdoor activities all year, from trekking to ski touring. It's very packable and therefore easy to always bring along. We use a GORE-TEX® fabric, which is the world-leading membrane for durable waterproofness (28,000mm), optimized breathability (RET 3-6), and total windproofness.

This jacket is made in GORE-TEX PACLITE® PLUS fabric – a soft, lightweight (75/g m2) tiny rip-stop fabric with a 20D recycled nylon face. It's extremely packable, thin, and lightweight while being waterproof, windproof, and offers excellent breathability. It has printed dots on the backer with a 3D function to keep distance to the body and create higher friction and a less sticky durable interior.

Main features include a helmet-compatible hood with one-hand adjustment, cuffs with Velcro® adjustments, an elastic bottom hem, a zippered chest pocket, and zippered front chest ventilation. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

Material	Gore-Tex® paclite 4, 20D recycled nylon

falketind thermo60 Hood M's

1804-22

Our warmest, most versatile lightweight synthetic insulation jacket.

This lightweight insulation jacket is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use our aeroDownproof face fabric to provide windproofness, lightweight and soft touch, and our thermo60 synthetic insulation which offers great warmth-to-weight values, good packability and will provide insulation even when wet.

The thermo60 insulation used is a 60g/m² 100% recycled polyester insulation which gives great thermal insulation to help the body to maintain its temperature, hence minimizing energy loss. The main face fabric is a windproof 20D recycled nylon ripstop fabric, and the shoulders, arms, and hood are reinforced with a durable and structured 30D lightweight rip-stop nylon Cordura for extra protection and durability. Both have PFC-free DWR treatment for additional water resistance.

Main features include a helmet-compatible hood with one-hand adjustment, a chest pocket with zipper, two hand pockets, and elastic cuffs. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. It's made to fit over and under the falketind Gore-Tex Jacket and is slightly short in length.

falketind warm2 Octa Hood M's 1815-22

A highly breathable wind-resistant versatile midlayer.

This innovative midlayer is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use a unique bonded fabric quality as the main material; the Octa liner provides great lightweight insulation and very effective moisture transportation, and the warm2 face fabric ensures good warmth, durability, and wind resistance while still allowing good moisture wicking.

The warm2 face is a 100% recycled fine-knitted recycled polyester which is super soft, wind-resistant and PFC-free DWR treated for extra protection. The liner is a lightweight multichannel Octa construction which is very open and will allow a continuous release of body heat to keep you comfortable during your activities. To optimize the airflow, the fabric on the back and under the arms is a stretchy recycled polyester fabric that provides excellent moisture transportation and breathability.

Main features include a beanie-compatible hood, elastic piping around the face, a chest pocket, two hand pockets, and cuffs with thumbholes. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

トレッキングからスノーアクティビティまで幅広く活躍するインサレーションショーツです。

軽量で防風性と保温性に優れ、中綿にはPinnecoを使用し尻部とその他の部位に適切な厚みが配されています。(メイン=40g/m², 膝・尻部=60g/m²)

インナーとしても、パンツの上からでも使用でき、両サイドにはフルジップが配され靴・パンツを脱がずに着脱できます。また左右のジッパーの色が異なる為、ジッパーを合わせる際に間違っって貴重な時間を費やすことがありません。太もものポケットに収納が可能です。

falketind warm2 Octa Hood W's 1816-22

A highly breathable wind-resistant versatile midlayer.

This innovative midlayer is made for all-year mountaineering but works perfectly for general outdoor activities ranging from trekking to ski touring. We use a unique bonded fabric quality as the main material; the Octa liner provides great lightweight insulation and very effective moisture transportation, and the warm2 face fabric ensures good warmth, durability, and wind resistance while still allowing good moisture wicking.

The warm2 face is a 100% recycled fine-knitted recycled polyester which is super soft, wind-resistant and PFC-free DWR treated for extra protection. The liner is a lightweight multichannel Octa construction which is very open and will allow a continuous release of body heat to keep you comfortable during your activities. To optimize the airflow, the fabric on the back and under the arms is a stretchy recycled polyester fabric that provides excellent moisture transportation and breathability.

Main features include a beanie-compatible hood, elastic piping around the face, a chest pocket, two hand pockets, and cuffs with thumbholes. The jacket has a technical fit with a Y-cut and articulated arms for good movement while climbing. A longer cut in the back ensures extra protection. No seams on the shoulders to prevent chafing when wearing a backpack.

falketind rugged slim Pants W's

1802-22

Our most durable, breathable slim legged softshell pants for mountaineering.

These slim-fit softshell pants are made for all-year mountaineering but are also suitable for general outdoor activities such as trekking and climbing. The main fabric is a 199 gr/m² flex1 softshell fabric, and we use this because it offers great movement, durability, windproofness, and high breathability. The thickness of the fabric is great for all-year use.

The main material is a 90D recycled double weaved flex1 fabric, our stretchiest double weave quality. It is treated with PFC-free DWR to provide extra wind and water resistance. The thighs, knees, and seat are reinforced with a 160D recycled flex fabric to provide extra protection on exposed areas, and also make the pants perfect for changing conditions.

Main features include a Custom-fit waist system™, a zipped fly with snap closure, two hand pockets with zippers, one thigh pocket, and bottom leg zippers with an internal gusset for adaptability to a different outdoor boot – including hiking boots. They have a flattering, slim fit with articulated knees for good mobility both when trekking, cleaving, and climbing.

Norrøna warmwool3 Hood M's 5213-22

Our most wool rich versatile outdoor/hiking midlayer.

This classic mid-layer is made for all kinds of outdoor activities but is also suitable for everyday wear due to its clean look and comfy feel. It's made in a heavier weight wool/recycled synthetic mix because it offers excellent warmth and durability.

The premium warmwool3 fabric weighs between 300 and 400 grams/m2 and emphasizes the wool's natural thermal properties and the durability, low weight, and moisture-wicking performances of synthetics. The unique construction traps warm air without stopping moisture transport, and when used alone, it's open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

Key features include a chest pocket with zipper closure, elastic cuffs with thumb holes, zippered hand-warming pockets, inside hang loop, elasticated hem, and a hood fitted for beanie.

The jacket has a regular fit with articulated arms for optimal movement and an asymmetric longer back cut for extra protection.

Norrøna warmwool3 Hood W's 5214-22

Our most wool rich versatile outdoor/hiking midlayer.

This classic mid-layer is made for all kinds of outdoor activities but is also suitable for everyday wear due to its clean look and comfy feel. It's made in a heavier weight wool/recycled synthetic mix because it offers excellent warmth and durability.

The premium warmwool3 fabric weighs between 300 and 400 grams/m2 and emphasizes the wool's natural thermal properties and the durability, low weight, and moisture-wicking performances of synthetics. The unique construction traps warm air without stopping moisture transport, and when used alone, it's open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

Key features include a chest pocket with zipper closure, elastic cuffs with thumb holes, zippered hand-warming pockets, inside hang loop, elasticated hem, and a hood fitted for beanie.

The jacket has a regular fit with articulated arms for optimal movement and an asymmetric longer back cut for extra protection.

Everyday casual

Hang up the heavy technical gear and do your own thing in comfort and style with everyday basics and activewear. Built with functional twists and solutions, 100% organic cotton, and recycled designs.

/29 everyday casual

/29 consists of T-shirts, accessories, and other cool stuff made especially for comfort and style before, during, and after your favorite activities. On the 29th of April 1929, the outdoorsman Jørgen Jørgensen started producing outdoor equipment, so when we named our essential basics, it seemed natural to play off the number 29.

Norrøna pureUll Zip Neck M's 5270-21

Premium, 100% merino wool baselayer zip neck.

This lightweight wool zip neck is perfect for all outdoor activities, and also suitable for everyday use because of its clean design. It is made in our own pureUll wool, a premium 100% merino quality that provides great thermal properties, comfort and breathability.

The pureUll is an all-natural material made in 100% ultra-fine 18.5 wool micron that offers the perfect balance between performance and non-itching next-to-skin softness. It's a medium-weight (180gr/sqm) single jersey knit which is highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging.

The natural properties of the wool offer great benefits: It is temperature-regulating, retains body heat while transporting moisture away effectively keeping you warm, even when wet, and is also natural odor-resistant. The wool is RWS certified, and it's sewn and knitted in Europe.

Key features include a high, snug collar and a half zip front. The fit is technical and it has articulated arms for good mobility.

Material	100% merino wool, 18,5 microns, 180g/m2

The pureUll is an all-natural material made in 100% ultra-fine 18.5 wool micron that offers the perfect balance between performance and non-itching next-to-skin softness. It's a medium-weight (180gr/sqm) single jersey knit which is highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging.

The natural properties of the wool offer great benefits: It is temperature-regulating, retains body heat while transporting moisture away effectively keeping you warm, even when wet, and is also natural odor-resistant. The wool is RWS certified, and it's sewn and knitted in Europe.

The fit is technical.

norrøna 120L Trolley Bag 5253-21

ノローナ 120L トローリー バッグ

耐久性に優れながら軽量性と収納性を追求したトラベルバックです。メインファブリックには100%廃棄物からリサイクルされた450デニールナイロン生地を用い、ボトムとなる部分は更に頑丈な900デニールナイロンを使用しています。どちらの生地にもPUコーティングが施され耐水圧は2000mmを持っています。バッグには85mmの車輪が付いており、荷物を快適に輸送・保管することができます。通常の短縮するTバーの代わりに、斜めに2つの取っ手を上部に配置することで、快適な移動を確保し、バッグが足の踵に当たるのを防ぎます。また、背面に金属製の骨組み用いていない為ロールアップしてコンパクトに収納することが可能です。

調節可能なパッド付きのショルダーストラップを使用すればバックパックとしても使用できます。ショルダーストラップは使用しないときにはフロントのスリットに簡単に収納することができます。フロントのU字ジッパーはフルレングスに近い開口が可能ですすべての持ち物に簡単にアクセスできます。

バッグには1つの大きなメインコンパートメントがあり、両サイドにはメッシュポケットが付いています。フロントポケットにはキーフック付きの小さなメッシュコンパートメントがあり、上部には名刺やIDカードなどが入る小さなポケットが付いています。背面と側面には中身を衝撃から守るソフトパッドが入っており、ジッパーのスライダーには小さな錠を付けてセキュリティを強化することができます。トップ、フロント、サイドには、持ち上げて移動するのに便利な複数の取っ手が付いています。T字型のジッパープラーは手袋やミトンを着用している場合に最適な、より良いグリップを提供します。

Iofoten 28L Pack W's

1004-22

Our most durable, fully-featured ski/snowboard pack designed for women.

This rugged backpack is made for freeride and ski touring but is also suitable for general outdoor and trekking activities. The main fabric is highly durable ECONYL® material which offers premium quality and closed-loop regeneration processes.

The 320D recycled nylon has a PU coating of 2000mm and consists of 100% regenerated nylon yarn derived from pre and post-consumer waste such as discarded fishing nets and other nylon waste (among others coming from Norway).

The pack has a big main compartment, spacious top compartment, a sectioned compartment for your avalanche equipment, and an easily accessible bottom compartment perfect for crampons and a rope. It's made for carrying both ski and snowboard, and you can decide whether you want to attach them to the side or front. You have easy access to the main compartment from a zippered entrance in the back. Here, you'll find a dedicated hydration pocket connected with a sleeve down the carrying strap.

There is an integrated helmet net that can be mounted on the front or underneath the pack and the net is designed to prevent snow from getting inside your helmet.

Other functional features include compression straps on the side, two ice ax attachments, shaped back panels, a hip belt with pocket, and a chest strap. You can easily hide away the straps in a little slit pocket if you need the pack for everyday use.

The pack has a shorter back than the Iofoten 30L with a slightly narrower shoulder strap placement.

NEW

lyngen 40L Pack

2015-22

A lightweight, durable pack made for ski touring.

This 40L fully-featured pack is made for ski touring but is also suitable for mountaineering and trekking. The main fabric is durable ECONYL® material which offers premium quality and closed-loop regeneration processes.

The main fabric is lightweight 70D ripstop ECONYL® and the pack is reinforced with a 70X320D ECONYL®. Both qualities have a PU coating of 2000 mm and consist of 100% regenerated nylon yarn derived from pre and post-consumer waste such as discarded fishing nets and other nylon waste (among others coming from Norway). High-quality zippers from YKK.

The pack has a highly ventilated back, with an open-back construction to create a gap between the back and the pack. The frame is made of steel and is arched in the back, shaped to make the back of the pack bend inwards itself. The aluminum bar helps keep the shape and prevents the volume from bulging out.

The pack has a big main compartment, spacious top compartment, a sectioned compartment for your avalanche equipment, and an easily accessible bottom compartment perfect for crampons and a rope. It's made for carrying both ski and snowboard, and you can decide whether you want to attach them to the side or front. You have easy access to the main compartment from a zippered entrance in the back, where you also find a dedicated hydration pocket connected with a sleeve down the carrying strap. There is an integrated helmet net that can be mounted on the front or underneath the pack and the net is designed to prevent snow from getting inside your helmet.

Other functional features include compression straps on the side, two ice ax attachments, a hip belt with pocket, and a chest strap with a flute buckle. You can easily hide away the straps in a little slit pocket if you need the pack for everyday use. The adjustable shoulder straps are made in a 3D construction to provide even more breathability.

/29 corespunUll Liner Gloves

3417-22

Thin merino wool liner glove.

A warm and versatile gloves that can be used alone or as liner gloves. It is made in our unique corespunUll, a premium merino wool quality that offers great thermal properties, durability, and comfort.

The corespunUll consists of 18,5-micron merino wool spun around a recycled nylon core and is exclusively developed by us. It's knitted and sewn in Europe.

The nylon core makes the fabric more durable and stabilizes the construction to enhance the functions and endurance of the wool knit. The RWS certifies wool will keep you warm even when wet, cools you down when warm, has natural anti-smell properties and feels soft next to the skin.

With a snug fit and a touch screen compatible thumb and index finger you can keep the gloves on when being active or checking your phone in the cold.

Size and fit guide

The fit will describe the width of the body and arms of jacket. Arm length, and jacket length is not influenced by the fit.

Men's jackets Outer/Shell

Metric

Slim Tight fit

Typically made for high intensive activities like running and biking. This fit is made to follow the body shape, and create a minimal room between the body and the jacket. Works best with layers that also have a slim or technical fit, not room for a lot of extra stuff under the jacket.

Fit under the jacket
Thin midlayers, thin insulation.

Typical products
Light shell jackets, light wind jackets and light softshells

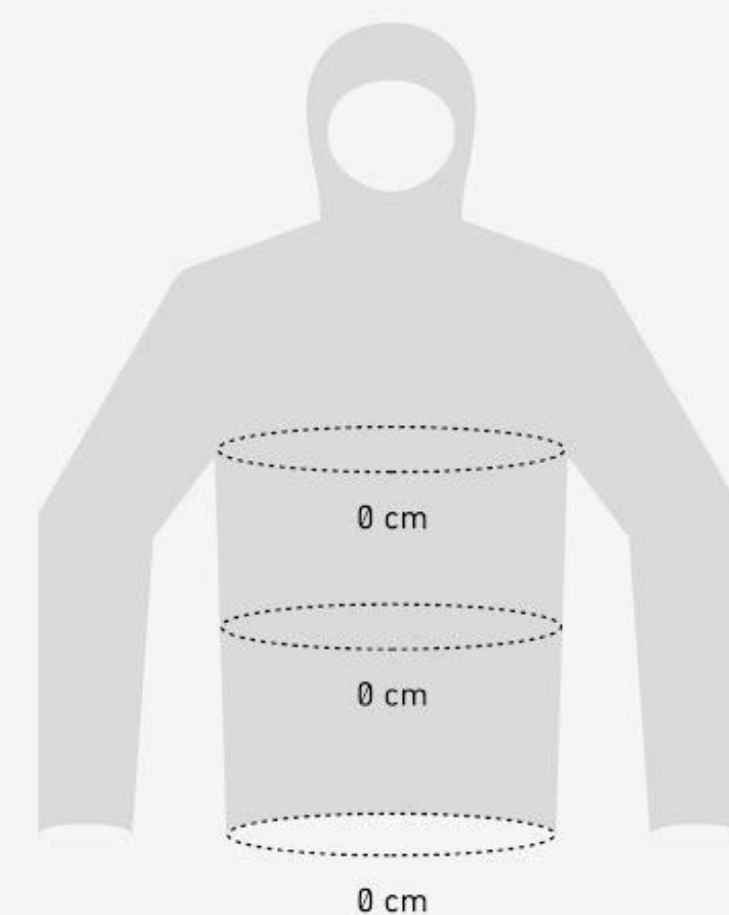

Technical Fitted fit

Typically made for mountain biking or mountaineering/climbing activities. The fit is made for perfect balance between allowing multiple layers underneath, but the jacket should not restrict movements or view when climbing or mountaineering.

Fit under the jacket
Different thickness of mid layers or down synthetic insulation. Preferably with Technical or regular fit.

Typical products
Shell jackets, wind jackets and softshells.

Regular* Normal fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Shell jackets, insulated shells, wind jackets and insulation.

Relaxed Loose fit

Typically made for skiing/snowboarding, outdoor and hunting. The fit is made for having room for multiple extra layering plus other necessary equipment like avalanche receivers or protection.

Fit under the jacket
Multiple thickness of mid layers or down synthetic insulation. Avalanche receivers, skins, protection and room for fill the pockets with a lot of stuff.

Typical products
Thicker shells, insulated shells and insulation.

Technology and materials

Learn more about the technology and material we use in our products and how we rate our product's performance.

Waterproof fabric

Gore-Tex® Pro most rugged is the most durable option designed for the harshest conditions, using a special high strength membrane, while maintaining durable waterproofness. It comes with a solution dyed woven GORE micro grid backer (plain weave) for an improved environmental footprint; the woven backer also reduces weight and bulk and minimize friction. It's the ultimate storm protection fabric. RET less than 13.

Gore-Tex® Pro most breathable is designed for extreme breathability to minimize moisture build up. Using a special air permeable membrane with durable waterproofness, it improves your base layer's drying time to ensure comfort in demanding conditions. It comes with a solution dyed woven GORE micro grid backer (ripstop weave) for an improved environmental footprint; the woven backer also reduces weight and bulk and minimize friction. The ultimate storm protection fabric. RET less than 6.

Gore-Tex® fabrics are durable, waterproof and windproof, combined with optimized breathability—ensuring products that maximize protection and comfort for the user. Waterproof: 28,000mm. Breathability: Extremely good, RET 3-6.

Gore-Tex® Active is waterproof, extremely breathable, and windproof. Low weight, low volume, soft and easy to pack, Gore-Tex® Active is good for more aerobic activities where you need protection from rain and wind. RET less than 3.

Gore-Tex® 3-layer has a unique 3-layer construction made for year-round use and a wide range of outdoor activities. It has a special Gore-Tex® membrane, bonded to a highly breathable outer material and an incredibly comfortable interlock knit inner lining. The benefit: comfort in warm and cold weather and no movement between the three layers, which means less wear and tear, and even greater durability. RET less than 6.

Gore-Tex®C-KNIT™ Backer Technology is specifically engineered for hikers, trekkers, and freeriders – optimizing comfort while providing durable, waterproof and windproof protection. The reliable and proven bi-component Gore-Tex® membrane system is bonded to an extremely thin, dense yet lightweight circular knit to form a patent-pending laminate. Weighing up to 10 percent less than previous 3-layer Gore-Tex® fabric, this new laminate improves breathability by as much as 15 percent in a less bulky, more robust 3-layer construction. The smooth texture of the knit backing is soft to the touch, and makes the garment easier to slide on and off over other layers. RET less than 6.

Gore-Tex® Shake Dry The new Gore-Tex® Shake Dry fabric durably protect against the weather and reduce sweat accumulation in high aerobic activities. Uniquely designed, the technology eliminates the face fabric, preventing absorption of water in order to maintain comfort in high aerobic activities. Garments will retain these attributes during use, wearers will not experience the chilling effect that can result from a wetted out face fabric, and the garment dries out fast. The excellent balance of protection and comfort allows the wearer to leave the garment on – rain or shine. RET less than 3. Read more at goretex.com.

dri™1 A super comfortable 2,5 layer offering full weather protection and high breathability. Stretchy, non porous, hydrophilic membrane utilizing a stretch woven face fabric and a printed PU membrane with quick drying technology.

dri™2 A 2-layer, ultra-thin, stretchy, non-porous, hydrophilic membrane that provides high levels of waterproofness and breathability. Technical Specifications: Waterproof: min. 20,000 mm. Breathability: Very good. Windproofness: 100%.

dri™3 A super comfortable combination of full weather protection and the comfort of highly breathable laminate. Non porous, woven face fabrics, a PU membrane featuring a quick drying micro polyester backer. Specifications: Waterproof: 20,000mm. Breathability: Very Good. Windproofness: 100%.

Wind resistant shells

Gore-Tex Infinium™ membrane is an ultra-thin weather protective layer which is laminated to various textile layer. Products made with Gore-Tex Infinium™ fabrics are totally windproof, highly water repellent yet deliver maximum breathability to keep you comfortable in cool and windy weather conditions. This combination of protection and breathability minimizes the wind's chilling effect while reducing the risk of overheating when you are active. Read more at goretex.com.

aero100™ is a light weight and technical polyamide fabric which offer excellent breathability (around 100 Mbar/l/m2/s). It is soft, water repellent and wind resistant with a weave construction designed to improve moisture vapour transportations during aerobic activities.

Softshells

flex™1 is a single ply stretchy fabric that provides wind and water repellence while allowing improved moisture vapor transportation rates compared to waterproof products. These specially designed fabrics have all the attributes we expect in a Soft Shell: stretch, water resistance, wind resistance and excellent moisture vapor transportation.

flex™3 is a 3-layer soft shell fabric that provides wind -and water-resistance while still allowing great moisture vapor transportation – perfect to use as a reinforcement fabric The face is made of durable nylon and backer wickable polyester.

Insulation materials in outerwear

PrimaLoft® is a patented microfiber, that gives great thermal insulation to help the body maintain its temperature, minimizing energy loss. Extremely light, water repellent, soft and compressible, and originally developed by the US Army to replace natural down. As down absorbs moisture, it becomes wet and loses its thermal-insulating abilities. PrimaLoft® absorbs three times less water, is 14% warmer when dry and 24% warmer when wet, than the competitive insulation. Read more at primaloft.com.

Polartec® LLC is the developer, manufacturer, and marketer of Polartec® performance fabrics. Polartec® products range from light weight wicking base layers, to insulation layers, to extreme weather protection and are utilized by the best clothing brands in the world. Read more at polartec.com.

Polartec® Thermal Pro® creates air pockets that trap air and retain body heat, providing outstanding warmth without much weight. These fabrics offer excellent breathability and dry quickly.

Polartec® Power Stretch® is a breathable, body-hugging, 4-way stretch, one-side fleece designed to keep you drier when you sweat and provide warmth without added weight. Outside face is smooth to provide better freedom.

Polartec® Power Stretch® Pro™ has the ability to retain warmth without restricting movement or agility during activities. The outer surface has a low-friction finish to reduce irritation when worn with other fabrics and increase overall abrasion resistance. This next-to-skin layer stays dry, breathable and comfortable by continuously transferring moisture vapor for rapid evaporation.

Polartec® Micro fleece fabric provides versatile thermoregulation that sustains light weight, breathable and fast drying characteristics.

Polartec® Alpha® starts with a highly efficient insulation fabric, which is based on the Polartec® Thermal Pro® High Loft technology platform. This technology is uniquely suited to create warmth without weight, and exceptional breathability, compressibility and dry times via high loft fibers in a low density knit. Current market synthetic insulations are not breathable enough to handle the “go” phases of most backcountry pursuits. They are typically additional garments that must be carried for use during static period. Polartec® Alpha excels at providing comfort for users on the move.

Polartec® Power Dry® pulls moisture directly from the skin and transfers it to the outer surface to quickly dissipate. This continuous evaporation process helps to keep you cool (as your body heat increases) and warm (when temperatures begin to drop). By physically embedding these wicking capabilities into the fabric structure, Polartec® Power Dry® doesn't rely on chemical fiber treatments to transfer moisture. Chemical approaches to managing saturation only provide a temporary solution that can wash away and leave you with a base fabric that doesn't perform.

Polartec® Power Grid is a patented grid design structure which reduce fabric weight while increasing warmth and compressibility.

Polartec® Power Wool™ is a design breakthrough for combining the distinct advantages of natural and synthetic fibers in a bi-component fabric. The industry standard of blending different yarns into a mixed composition reduces the intended benefits and hampers overall fabric performance. By isolating a merino wool interior and a synthetic fiber exterior we developed a hybrid fabric with distinct surface features to optimize wicking, breathability, odor resistance and durability.

Polartec 200 Series The classic midweight fleece. Polartec® Fleece is the original synthetic fleece, forever changing what we wear in colder weather. This now proven thermal knit technology delivers breathable performance, soft comfort and long-lasting breathability.

thermo40 “Thermo” is our general term for any synthetic insulation. It gives great thermal insulation to help the body to maintain its temperature, minimizing energy loss. We use synthetic insulation as an alternative to down, as it keeps its functionality even in wet conditions. While moisture is the weak point of down, synthetic insulation shows its strength during sweat-inducing activities, when being exposed to rain or under continuous humid conditions. Synthetic insulation provides a very good warmth-to-weight-ratio and is easy to maintain. The number behind Thermo refers to the weight in gr/sqm of the insulation used in the product. The suppliers of our synthetic insulation are Primaloft and Pinneco.

down™750 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™750 means down fill power from 750 to 800 cu in/oz with the percentage of down cluster from 93–96%.

down™850 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™850 means down fill power from 850 to 900 cu in/oz with the percentage of down cluster from 93–96%.

down™950 Our down products use the highest available down quality that we can find, which is a bi-product of the food industry (in contrast to being killed just for insulation). All treatment of the birds complies with European standards, and the highly specialized washing of the down passes the Oeko-Tex 100 standards. Our down™950 means down fill power from 950 to 1000 cu in/oz with the percentage of down cluster from 93–96%.

Insulation materials in midlayers

warm™1 Weighing under 200 grams/m², these are our lightest fleeces. Perfect as a midlayer, or wear it instead of a jacket without compromising on insulation and breathability. These fleeces are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warm™2 Weighing between 200 and 300 grams/m², these fleeces allow a good combination of warmth and moisture transportation. They provide more bulk and trap more air than our warm™1 fabric. These fleeces are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warmwool™1 Weighing under 200 grams/m², these are our lightest wool mix for brushed knits. The material composition mix emphasis the benefits from the natural performance from wool and the durability, low weight and wicking performances from synthetics, to combine the best of two worlds. Perfect as a midlayer, or as a baselayer without compromising on insulation and breathability. These knits are among the best in the market. Their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in milder conditions.

warmwool™2 Weighing between 200 and 300 grams/m², these are our mid-weight wool synthetic blends. They are bulkier and trap more air than our warmwool1 fabrics. The material composition mix emphasizes the benefits of wool's natural properties and the durability, low weight and moisture-wicking performances of

synthetics. These fabrics are among the best in the market, and their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

warmwool3 Weighing 300 grams/m² and above, these are our higher weight wool synthetic blends. They are bulkier and trap more air than our warmwool2 fabrics. The material composition mix emphasizes the benefits of wool's natural properties and the durability, low weight, and moisture-wicking performances of synthetics. These fabrics are among the best in the market, and their unique constructions and structures are perfect for different types of activities, as they trap warm air without stopping moisture transport. When used alone, the fabrics are open enough to allow air to circulate, making you feel comfortable in both mild and cold conditions.

Wool

pureUll An all-natural material consisting of 100% merino wool. Made with an ultra-fine 18.5 wool micron, it offers the perfect balance between performance and non-itching softness. Medium-weight (180gr/sqm) single jersey knit, designed to offer a versatile and flexible inner layer. Highly durable for its kind in terms of both wear and tear, pilling, abrasion, and snagging. It is temperature-regulating and regulates the core temperature by both insulating and cooling, providing comfort across a range of climates. It retains body heat while transporting moisture away from the body, keeping you dry and warm, even when wet. It absorbs moisture without feeling wet and has good moisture wicking function while offering great moisture vapor transmission. It also has natural anti-odor control. For environmental reasons we have not used any surface treatments. This enhances its natural benefits and gives the material a super soft, warm feel with a slightly fuzzy outside. The natural loft also traps heat very efficiently between the fibers, making it warmer than a synthetic alternative of the same weight. The wool is RWS certified.

Other materials/technologies

hiloflex™ Weighing between 200 and 300 grams/m², these double weave constructed materials provide a unique combination of warmth and weather protection. While many conventional fleeces are less durable due to their knit construction, the fabric has a much more durable surface due to its woven flat face. This makes it strong towards abrasion and keep the material wind and water resistant. A lofty interior provides great thermal properties with a good warmth to weight ratio. Thanks to an open construction, the fabric is highly breathable, and it offers a perfect balance between heat and comfort dynamic warmth. Stretch in at least one direction ensures very good mobility and comfort when being active.

Viking denim Our newly developed Viking denim is designed to combine sustainable, functional fibers with organic cotton creating a classic denim with enhanced functions. This innovative fabric is extremely durable, lightweight and flexible with quick drying moisture wicking capabilities. Blended perfectly into timeless designs, we're introducing a new generation of sophisticated outdoor apparel that works seamlessly wherever you're heading.

bio These materials biodegrade in specific environments under certain conditions, such as landfills and oceans, yet remain unchanged in the consumer's wardrobe. The ability to biodegrade is important once these fibers make their way outside of the closed loop and into the environment. This happens because fibers are broken down and released due to normal wear and tear and washing of a garment, or when a garment is not disposed of safely and finds its way into a landfill or ocean water.

DWR Durable Water Resistant finish to prevent surface saturation of the textiles. Contains of short chain fluorocarbon based C6.

Pontetorto A world renowned mill from Italy founded 1952. Specialized in technical knits/fleeces with highest quality.

viking grid200 is designed as reinforcement fabric with high cut resistance. It's mainly used as instep reinforcement in our ski pants to prevent that ski steel edges cause damage to the fabric. The innovative fabric is extremely durable, it is synthetic woven in a 3L laminate construction combined with high-strength fibers in one direction, which makes it one of our strongest fabric in the collection. The surface is DWR treated for great water protection. The weight for this type of material is 200-300 grams/m².

viking grid300 is designed as reinforcement fabric with high cut resistance. It's mainly used as instep reinforcement in our ski pants to prevent that ski steel edges cause damage to the fabric. The innovative fabric is extremely durable, it is a synthetic woven in a 3L laminate construction combined with high-strength fibers in both directions, which makes it our strongest fabric in the collection. Due to a special yarn design it will keep its strength even if exposed to UV light. The surface is DWR treated for great water protection. The weight for this type of material 300g and above.

Organic Cotton is produced without the use of harmful pesticides, harsh chemical bleaches or dyes and is allergy-free. Today Norrøna uses 100% organic cotton in all of our cotton products.

BioNylon® is a highly sustainable bio mass fabric made of castor bean – a crop which requires just a fraction of arable-land. The production of the yarn allows a significant reduction of carbon dioxide in addition to considerably reduce CO₂ during the dyeing process. The fabric offers the usual assets of PA such as hard-wearing properties, good flexibility and comfort, but with a shorter drying time.

PFC-free Products marked with "PFC-free" are not treated with a DWR that contains PFC (polyfluorinated chemicals). We are working determinately to phase out PFC from all of our products, but it is difficult to find an alternative that satisfy our quality demands.

ECONYL® yarn is a 100% regenerated nylon yarn derived from pre and post consumer waste such as discarded fishing nets and other nylon waste (among others coming from Norway). The aim of this process made by Italian company Aquafill is to give a new life to all kind of waste in order to make our environment cleaner. All new Norrøna backpacks from FW1920 are made from ECONYL® yarn.

MulesingFree Mulesing is a controversial surgical procedure removing wool-bearing skin from the tail and breech area on sheep to prevent fly infestation. The process is usually done without any without anaesthetisation and can be extremely painful. As a part of our animal welfare commitment, we only source traceable wool from sheep that have been treated well and not been mulesed.

ePTFE™ Expanded polytetrafluoroethylene, or ePTFE, is the core material in many of Gore's solutions. An ePTFE membrane is created when PTFE – a linear polymer consisting of fluorine and carbon molecules – is expanded, creating a microporous structure with very desirable characteristics, including a high strength-to-weight ratio, biocompatibility, high thermal resistance and many others. ePTFE is inherently waterproof, windproof and chemically inert, and each ePTFE membrane is adjusted to maximize its inherent properties to meet those requirements. For instance, Gore-Tex® ACTIVE PRODUCTS offer superior water-beading for cyclists and other athletes wanting to reduce moisture accumulation, either from sweat or rain. For this application, the ePTFE membrane is engineered for maximum breathability – allowing sweat to vaporize – while repelling wind and rain.

PU (Polyurethane) is a laminated membrane or coating used on face fabric to provide waterproof yet ventilating properties. The membrane has tiny holes too small to let liquid water enter but large enough to allow water vapour to escape.

Pittards Established in 1826, Pittards has been making high quality leather in England for almost 200 years. Pittards technical expertise of performance leathers. Incorporating technical qualities such as resistance to water, abrasion, and staining, We use Mainly goat and sheep leather for a great balance between function and tactile feel.

YKK Aquaseal® zipper is a watertight and water repellent product line. They are perfect for all sorts of gear where water and air tightness is a must. Smoother and more flexible, they offer optimum protection thanks to the film coated tape and the innovative zip element mechanism that seal the zipper completely. This is the first truly waterproof zipper provided on Norrøna products. Read more at [aquaseal.com](https://www.aquaseal.com).

equalizer1 A synthetic technology with next-to-skin comfort, used for baselayers such as technical t-shirts. The main function is to wick moisture and spread it to a larger area to be able to dry quickly for increased comfort and performance. Other characteristics are good UV protection, low weight, soft touch and durability.

Pertex® uses incredibly fine yarns, precisely woven to provide a very lightweight yet strong and durable fabric. Its softness allows down and synthetic insulation to fully loft, while the downproof construction prevents the down from leaking through the face. The fabric is windproof. Our products use different variations, such as Quantum, Classic and Microlight These have the same fundamental characteristics but vary on weight.

Zxion® A polyester fiber with high tensile strength and great elasticity. It has excellent heat resistance, acid resistance, resistance to cutting, vibration damping property, and low water absorption.

Cordura is the brand name for a collection of fabrics used in a wide array of products. Cordura fabrics are known for their durability and resistance to abrasions, tears and scuffs. Cordura fabrics are usually made of Nylon 6.6 High Tenacity, but may be blended with cotton or other natural fibers.

Clarino Manmade synthetic like material, used in gloves. Made by Kuraray Co., Ltd of Japan. During manufacturing it is microscopically perforated to give it breathability similar to that of natural leather. Clarino is based on a non-woven fabric composed of special synthetic fibers that are intertwined three-dimensionally. The material's softness and suppleness arise from the structure of the non-woven fabric's special fibers—a superfine fiber construction and tiny cavities. Superb durability, softness when wet and allow a close fit with great tactility is main characteristics of the quality.

Carrying systems

integral™ is a solid, anatomical carrying system for moderate loads, up to 15 kg. Emphasis is placed on hip movement, weight distribution and practical solutions. Consisting of a laminated back with a vertical aluminium bar, it makes a classic yet sturdy carrying system, that can also be shaped after your back.

dynamic™ Our carrying system without aluminum support bars or frames. We use these systems on many of our small packs where flexibility is a key factor.

CSR Standards

GOTS stands for Global Organic Textile Standard and is constituted of four reputable organizations with expertise in organic (fiber) farming as well as environmentally and socially responsible textile processing and manufacturing.

The standard stipulates requirements throughout the supply chain for both ecology and labor conditions in textile and apparel manufacturing using organically produced raw materials.

The Responsible Down Standard (RDS/RDS2.0) ensures that down and feathers come from ducks and geese that have been treated well. This means enabling them to live healthy lives, express innate behavior, and not suffer from pain, fear or distress. The standard also follows the chain of custody from farm to product, so consumers can be confident that the down and feathers in the products they choose are truly RDS.

The Responsible Wool Standard safeguards the welfare of animals and ensures that sheep are treated with respect to the Five Freedoms. Through the processing stages, certification ensures that wool from certified farms is properly identified and tracked. Farms participating in the RWS are audited annually by an independent third party certification body. As certified wool from these farms moves through the supply, the Textile Exchange Content Claim Standard is used to provide a chain of custody system to the final product. Each stage of production is certified to this standard by an accredited third party.

Norrøna uses RWS as a minimum standard for our wool. While we are trying to get all our suppliers to use RWS due to its international standard, over the past year we have found different degrees of compliance through the whole supply chain. As this is a new standard, we have found some of our suppliers having difficulty fulfilling the paper trail. In those cases where we can not fully verify the RWS standard we still rely on 3rd party verification to ensure traceability and full compliance with RWS standards.

As both our supply chain purchasing and RWS are still transitioning, we feel it is more critical to ensure the five freedoms of animals, proper land use and traceability. For our wool products which do not currently have RWS certification, we can show robust 3rd party verification equal to our RWS certified.

As both our supply chain purchasing and RWS are still transitioning, we feel it is more critical to ensure the five freedoms of animals, proper land use and traceability.

For our wool products which do not currently have RWS certification, we can show robust 3rd party verification equal to our RWS certified wool. All the wool we buy has a premium for the quality, sustainability and traceability to ensure us and our consumers of both and sheep and the lands wellbeing.

PFCec FREE stands for "Per and Poly-Fluorinated Chemical free of Environmental Concern", which means that the water repellent treatment (DWR) of all products marked with "PFCec FREE DWR" does not contain PFCs which break down and dissolve into water, soil or air, and therefore do not harm the environment. Gore laminates with a PFCecFREE call out do not have surface PFC agents on both textile and membrane.

Gore is committed to continuously reducing the environmental footprint of their products while maintaining a high level of durability and performance. Gore has therefore set the goal of eliminating PFCs of Environmental Concern (PFCec FREE) by 2023.

OekoTex is an independent testing and certification system for raw, semi-finished, and finished textile products at all processing levels. To be certified all parts of an article must meet the required criteria – in addition to the outer fabric, for example, also the sewing threads, inserts, prints etc., as well as non-textile accessories, such as buttons, zip fasteners, rivets etc.

Bluesign The independent bluesign® system pursues the unique approach to minimize the environmental impact of materials throughout the production process. The so-called Input Stream Management ensures that all during the textile production process applied substances and raw materials are already verified in advance of the production. The system focus guarantees the application of sustainable ingredients in a cleaner process that reduces water and air emissions, improves its waste water treatment and generally reduces its ecological footprint.
